VELUX Modular Skylights brings
your home to life with natural light,
creating a bright and airy space.

What are VELUX Modular Skylights?

VELUX Modular Skylights are the perfect way to open up large rooms in your home and create a light, bright and spacious environment. VELUX Modular Skylights combine elegant lines and intelligent design with exceptional energy efficiency.

Unique design

Developed in collaboration with renowned architects Foster + Partners, VELUX Modular Skylights offers a minimalist design with super-slim profiles. The electronics and motors in each module are concealed, creating a simple and refined look, inside and out.

Robust and energy efficient

All VELUX Modular Skylights are constructed from an advanced composite material that makes them very strong and highly energy-efficient. The entire installation is designed to withstand extreme weather conditions, with a life expectancy stretching far into the future and a 10 Year Product Guarantee.

Here, we can see the impact of natural light on the living space; creating a fresh and relaxed environment.

Light up the rooms in your home

The living room is the heart of the home. It's where we relax together, perhaps with a good book, watch TV, or play games. The range of activities that we enjoy in our living rooms means the lighting must meet everyone's needs, whilst also making the room look attractive morning, noon and night.

With VELUX Modular Skylights, you can supplement the limited light from your living room's vertical windows with light that shines into the centre of your room. The light from a skylight enters directly from above – a much stronger source of illumination than light coming from the side through windows in the walls. No matter whether the sun is shining or the sky is blanketed in clouds, VELUX Modular Skylights guarantees plenty of natural light throughout the day.

The solution

If you want to transform your home with the effects of natural light, we recommend VELUX Modular Skylights with multiple modules in a row. This solution can be opened automatically for ventilation and the addition of electrically operated roller blinds offers greater light and energy control.

VELUX INTEGRA® control pad with touch screen and swipe function uses icons for easy and intuitive control.

Electrically operated roller blind softly diffuses the light.

Prices and solutions

VELUX Modular Skylights

Your daylighting solution
VELUX Modular Skylights are available as Longlights and on the following pages you will find information on the packages that we offer for the full installation of this product.

Sub-construction

Sub-construction dimensions depend on the scope of the project

VELUX Modular Skylights such as Longlights are installed on a sub-construction made out of wood, steel or concrete. The sub-construction does not form part of the VELUX skylight solution. The individual details of each building's roof structure and load tolerances (statics) will vary from project to project.

For installation purposes, it is essential that the sub-construction should meet precise specifications in terms of dimensions, load-bearing capacity etc. VELUX product sheets and installation instructions for Longlights contain detailed descriptions of each product and the relevant installation process.

Remember to consult your local installer before choosing your solution, or else contact the VELUX Modular Skylights Support Team for further information and project specific details.

Download and read our Longlight installation guide:
